PROFESSIONAL SUMMARY

Driven BCom Informatics Honours student specialising in Data Engineering and Pipeline Architecture. Proven experience designing, implementing, and optimising automated end-to-end ETL frameworks using Python, C#, and relational databases (SQL Server/PostgreSQL). Demonstrated leadership as Technical Team Lead on an enterprise-level consulting project (EPI-USE Africa), bridging raw data infrastructure, business analysis, and stakeholder requirements. Eager to contribute as a graduate developer, applying technical problem-solving skills within an entrepreneurial, flat-structured culture through the Investec Tech Graduate Programme.

TECHNICAL SKILLS & CORE COMPETENCIES

Data Engineering & Architecture: Database Design, ETL Pipelines, Data Scraping/Ingestion, Data Modelling, Schema Optimisation, Unstructured Data Parsing.

Languages: Python, SQL (T-SQL/PL-pgSQL), C# (.NET), R, JavaScript, TypeScript, HTML5, CSS3.

Frameworks & Libraries: FastAPI, Angular, Next.js, React, Node.js, Entity Framework, TailwindCSS, Streamlit.

Databases & Analytics: Microsoft SQL Server, PostgreSQL, DuckDB, Vector Embeddings, PowerBI.

Tools & Platforms: Git, GitHub, Jupyter Notebook, Jira, Visual Studio, Microsoft Azure, Microsoft 365 Suite, CI/CD.

Methodologies: Agile/Scrum, Test-Driven Development (TDD), RESTful API Design, Systems Analysis.

KEY DATA ENGINEERING & ANALYTICS PROJECTS

Log Analytics Pipeline | Python, DuckDB, Streamlit | github.com/ramokhele-manyeli/log-analytics-project

- Engineered an API log analytics pipeline using DuckDB for high-performance in-process SQL querying across large, structured log datasets — aligned directly with real-world data engineering ingestion and transformation patterns.
- Built automated incident detection logic to flag anomalies in API behaviour, translating raw log streams into actionable operational intelligence.
- Delivered an interactive Streamlit dashboard enabling stakeholders to explore ingestion metrics, error rates, and performance trends without writing SQL.

Job Market Analytics Platform | Python, SQL Server, Angular | *End-to-End Data Pipeline & Dashboard* | github.com/ramo-23/Job-Market-Analytics

- Engineered an end-to-end analytics pipeline focused on extracting, cleaning, and consolidating highly unstructured web-scraped job listings data.
- Transformed raw, disparate data pools into structured relational tables using SQL Server, implementing performant stored procedures.
- Connected the data warehouse layer to a custom Angular dashboard, providing clear visual analytics on job market trends and demand.

Retail Price Optimisation | Python, Jupyter Notebook, Machine Learning | github.com/ramokhele-manyeli/retail-price-optimization

- Conducted exploratory data analysis on 20,000+ retail transactions to quantify price elasticity, predict demand, and identify revenue-maximising pricing strategies.
- Applied machine learning regression models to surface data-driven pricing recommendations, demonstrating ability to translate large datasets into actionable business insight.

Regression-Scholar | Python, FastAPI, Gemini Pro API, Vector Database | *RAG Architecture* | github.com/ramo-23/regression-scholar

- Developed a specialised Retrieval-Augmented Generation (RAG) system to ingest and query complex academic research papers on advanced statistical techniques.
- Built the data parsing and chunking layer, converting academic PDF structures into clean textual vectors to prevent AI hallucinations.
- Exposed data access patterns via a performant FastAPI endpoint to deliver grounded, context-aware answers.

Music Analytics Platform | Python, DuckDB, C# .NET 10, ASP.NET Core, Dapper, Angular 18 | *Star Schema · ETL Pipeline · REST API* | github.com/ramo-23/MusicAnalyticsPlatform

- Built an end-to-end analytics platform ingesting crowdsourced music data from the Last.fm REST API via a Python ETL pipeline, normalising raw JSON into a DuckDB star schema (Fact_Metrics, Dim_Track, Dim_Artist).
- Designed and exposed a read-only C# ASP.NET Core REST API using Dapper for lightweight, direct SQL execution against the embedded analytical warehouse.
- Developed a reactive Angular 18 frontend using Signals and computed pagination to serve a live dashboard with zero unnecessary API roundtrips; deployed on Vercel with the backend hosted on Render.

PROFESSIONAL EXPERIENCE

Student Intern (Technical Team Leader) | EPI-USE Africa | Pretoria, Gauteng February 2025 – November 2025

- **Consulting & Leadership:** Selected as Team Leader for a cross-functional, 5-member Agile/Scrum team delivering Skillsync, an enterprise career and development milestone platform for a real-world corporate client.
- **Stakeholder Alignment:** Acted as the primary interface between EPI-USE Africa management and academic lecturers, converting high-level business goals into concrete technical deliverables.
- **Data & System Optimisation:** Designed and implemented intelligent platform algorithms including a milestone recommendation engine and sentiment analysis for consultant feedback metrics.
- **Documentation Standards:** Generated software architecture diagrams, ERDs, and project lifecycle documentation to strict corporate consultancy baselines.
- Achieved an 88% average across deliverables; nominated for Best Fit-for-Purpose System and Best Overall System.

Admin Team Member | Keep That Gold Shining (KTG) – UP EBIT JCP | Pretoria, South Africa 01/2024 – 12/2025

- Coordinated cross-functional student engagement events and collaborated with academic staff to align programme delivery with curriculum requirements.

EDUCATION

BCom Honours in Informatics | University of Pretoria 2026

Relevant Modules: Data Warehousing (INF 788), Applied Data Science (INF 791)

BCom Informatics (Statistics & Data Science) | University of Pretoria 2023 – 2025

Relevant Modules: Applications in Data Science (WST 212), The Science of Data Analytics (STK 353), Statistics 210 & 220, Statistics 310, Information Systems 113, Database Systems & Design (INF 214), Systems Analysis & Design (INF 271/272), Software Architecture (INF 354), Data Structures & Algorithms (INF 225), Informatics Project (INF 370).

CERTIFICATIONS & ACTIVITIES

- Behavioural Aspect of Project Management Badge – University of Pretoria (2024)
- Ready for Work Programme – University of Pretoria Enterprises (2024)
- HTML, CSS & JavaScript for Web Developers – Coursera (2024)
- Foundational SQL – FreeCodeCamp (2024)
